

## ABOUT US

Hi-Tech Scaffolding Pvt. Ltd. specializes in offering a wide range of scaffolding material on hire. We are a team driven by the highest professional and ethical standards. Our focus on efficient service, together with our rich experience, makes us a leading name in the scaffolding material hiring business in India.

Timely delivery, cost effectiveness, customer friendly system, prompt and timely servicing of products are our crucial factors.

At Hi-Tech Scaffolding Pvt. Ltd., one can quickly find scaffolding materials at above merits. So that, all the advantages such as "On Time, In Budget, With Quality" are available, as we SUPPORT TO BUILD.

## HIRERS FOR

Scaffolding Materials i.e.:

- > Prop
- > C- Channel
- > Span
- > U Head
- > Square Tube
- > Base Jack
- > H Frame
- > Joint Pin
- > Centering Plate
- > Wallform Plate
- > Soldier
- > Coupler
- > Pipe
- > Platform
- > Cuplock System

**SCAFFOLDING ON  
HIRE BASIS**

## Prop >

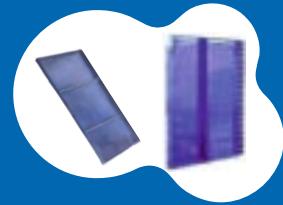

Scaffolding props are an essential tool in construction, providing reliable support for a variety of tasks. Designed for strength, durability, and adjustability, props ensure safety and efficiency on every site. They are used as temporary support for slabs & beams during construction.

## Span >

Span is a versatile scaffolding component typically made of steel, that can be adjusted to different lengths to provide temporary support to structures during construction. particularly when laying concrete slabs, allowing for flexibility in various distances depending on the project needs. It is ideal for use in bridges, tunnels, and multi-story buildings.

## Centering & Wallform Plate >

Centering Plates are used in Slab and Beam Casting to hold the concrete till the time it takes shape and solidates itself enough to take its own load. Wallform plates are used for constructing walls of various shapes and sizes that ensures accurate alignment & smooth finishing of concrete surfaces.

## H - Frame >

H Frames are two vertical frames connected by horizontal cross braces, creating an "H" shape, which serves as the primary support structure for a working platform. Using of wheels with H Frame can make it easy for activities where man movement is required. Due to its ability to reach various heights on a building's exterior side they are widely used to provide access to a building's facade for tasks like painting, plastering, insulation, cladding installation, window replacement, etc.

## Cuplock System >

The Cuplock System is a revolutionary scaffolding solution, known for its quick assembly, versatility, and robust performance. The unique locking system allows components to be connected securely providing flexibility for complex structures. It can be adapted for scaling in horizontal as well as vertical direction for any size.

## Square Tube (50x50mm) >

C Channels & Square tubes are versatile & durable structural components used during construction of buildings, walls, roofs and ceiling supports. They are ideal for projects that require precise alignment and superior load distribution. Their structural design offers better resistance to bending and torsion compared to round pipes.

## Scaffolding Pipe >

Scaffolding Pipes are the backbone of any scaffolding system, providing reliable support and stability for construction projects of all scales. They are used to provide a stable platform for workers to access elevated areas during construction projects; these pipes are typically joined together using couplers and fittings to create a complete scaffolding system.
